

# STRENGTHENING LEADERSHIP, & RESILIENCE, WELL-BEING

NTOA  
in partnership with

## A DYNAMIC 2-DAY WORKSHOP

This workshop introduces "MAGNUS OVEA" as a strategic framework tailored for first responders to thrive in high-pressure and volatile environments. Drawing from Colonel Boyd's OODA Loop, Albert Bandura's Theory of Social Cognition, tested and validated with the US Joint Special Operations Command, the workshop introduces Dr. Mitch Javidi's MAGNUS OVEA, a General Theory of Human Performance. It equips participants with a comprehensive arsenal of Situational, Cognitive and Emotional dominance tools. These tools are designed to neurobiologically activate peak performance and deep emotional intelligence, fostering resilience and wellness essential for success in challenging operations.

This course is necessary for all personnel across law enforcement, including SWAT, special operations, corrections and patrol, catering to individuals at every rank. It leads attendees on a Great to Magnus journey to inspire, educate, impact and transcend, personally and professionally.

"I found the course very eye-opening and inspiring. The three assessments caused me to pause and do a bit of self-reflection. After taking the course, I found myself wanting to learn more about leadership and how to influence, lead and train others."

- Investigator, Lancaster County (NE) Sheriff's Department

## Take a deep dive into the psychology of law enforcement leadership!

Join us and explore the core principles of effective leadership in law enforcement. This transformative program delves into the psychology behind decision-making, team dynamics, and the mindset required to lead with confidence in today's complex environment.
